

APEX SOLUTIONS

Business Continuity Plan (BCP) & Disaster Recovery Framework

Document ID: APEX-BCP-PRO-003

Version: 1.0

Effective Date: [Insert Date]

Classification: Restricted - Operations & Risk Management

1. PURPOSE

The purpose of this Business Continuity Plan (BCP) is to establish a rigorous operational blueprint that guarantees Apex Solutions can fulfill its B2B distribution contracts and Repair-as-a-Service (RaaS) monthly quotas during an unexpected disruption.

This framework identifies critical business processes, sets recovery objectives, and provides step-by-step technical playbooks to mitigate the impact of power grid failures, network outages, cyber incidents, or supply chain bottlenecks at the Rocklin, CA headquarters.

2. SCOPE & FRAMEWORK ALIGNMENT

This plan applies to all infrastructure, logistics networks, data assets, and operational personnel at Apex Solutions. It is explicitly designed to meet the resilience and risk mitigation criteria of:

- **ISO/IEC 27001 (Control A.17):** Information Security Continuity.
- **R2v3 Standard (Core Requirement 3):** Operational Controls and Business Continuity provisions for ITAD organizations.
- **NIST SP 800-34 Rev. 1:** Contingency Planning Guide for Federal Information Systems

3. BUSINESS IMPACT ANALYSIS (BIA) & CRITICAL APP MAPPING

To protect the distribution pipeline, Apex Solutions has established maximum allowable downtime thresholds for its core software applications:

Critical Business Application	Operational Function	Recovery Time Objective (RTO)	Recovery Point Objective (RPO)
[e.g., Shopify / ERP Portal]	Bulk Contract Sales & Orders	[e.g., 4 Hours]	[e.g., 1 Hour]
[e.g., QuickBooks / Financials]	Wholesale B2B Billing & Invoicing	[e.g., 24 Hours]	[e.g., 24 Hours]
[e.g., Google Workspace / OneDrive]	Client Contract Templates & Communications	[e.g., 8 Hours]	[e.g., 4 Hours]
[e.g., Shipping Portal / UPS / FedEx]	High-Volume Shipping & Logistics Labels	[e.g., 2 Hours]	[e.g., 1 Hour]

3.1 Contractual Quota Thresholds

- **Target Monthly Fulfillment Contract Baseline:** [Insert Number, e.g., 500] blank Apple laptops processed, refurbished, and distributed per calendar month.
- **Critical Contract Delivery Window:** [Insert Date Range, e.g., 20th through 28th of each month].
- **Maximum Allowable Disruption Window (MADW):** The business cannot experience a total operations freeze exceeding [Insert Hours/Days, e.g., 48 Hours] during the critical delivery window without violating client Service Level Agreements (SLAs) and incurring financial penalties.

4. OPERATIONAL THREAT RESPONSE PLAYBOOKS

(Diagram: Apex Solutions Threat Response Playbook Flow)

4.1 Playbook A: Facilities Power and Network Disruption

In the event of a localized power grid failure or fiber broadband outage at the Rocklin, CA headquarters:

1. **Immediate Action:** Technicians must gracefully shut down active hardware diagnostics benches and active Apple configuration stations to prevent data corruption or component power surges.
2. **Backup Power Activation:** Deploy emergency portable backup power systems [Insert System Type, e.g., uninterruptible power supplies (UPS) or generators] to power critical inventory scanners and local label printers.
3. **Network Failover Execution:** Activate cellular failover endpoints [Insert Network Type, e.g., 5G mobile hotspots or secondary LTE routers] to re-establish secure encrypted tunnels to the cloud shipping portals and the inventory tracking software.

4.2 Playbook B: Ransomware or Enterprise Cyber Attack

If malicious code or an unauthorized encryption event compromises operational systems:

1. **Immediate Containment:** Disconnect all local testing laptops, office computers, and network-attached storage units from the local internet router immediately to stop lateral malware movement.
2. **Eradication and Cleansing:** Wipe the affected devices completely following the cryptographic erase protocols detailed in APEX-ITAD-POL-001.
3. **Data Recovery Strategy:** Re-image corporate workstations with standard operating system baselines and pull clean, non-infected historical operational data from the secure cloud backup tier [Insert Provider, e.g., Google Cloud/AWS automated backups].

4.3 Playbook C: Supply Chain & Parts Procurement Bottleneck

If a primary Tier 2 or Tier 3 component vendor fails to deliver bulk Apple screens, logic boards, or parts, putting the monthly B2B distribution contract at risk:

1. **Immediate Sourcing Pivot:** The analyst must flag the delay and immediately trigger alternative procurement channels via the pre-approved secondary vendor registry.
2. **Buffer Inventory Utilization:** Draw down stock from the on-site Safety Buffer Inventory which must maintain a minimum baseline of [Insert Number, e.g., 50] verified A-grade components at all times.

5. TEAM ROLES AND RESPONSIBILITIES

- **Compliance & Security Team (Mostafa Rashid):** Responsible for conducting an annual Business Impact Analysis (BIA), verifying that cloud data backup procedures function correctly, documenting incident root causes, and providing compliance evidence during R2/ISO audits.
- **Technical & Logistics Team:** Responsible for verifying physical asset counts during an outage, maintaining hardware safety baselines, executing offline manual tracking procedures if software goes down, and activating backup hardware tools.
- **Executive & Ownership Team:** Responsible for officially declaring a state of disaster, managing direct legal communications with corporate B2B clients regarding SLA modifications, and authorizing emergency spending for alternative parts sourcing.

6. DOCUMENT CONTROL & TESTING SCHEDULE

This framework must be tested at least once every 12 months using a tabletop simulation to verify that recovery metrics match real-world operational speeds.
